

MAINTENANCE ADVICE

MOBIROOF ECO

MobiRoof ECO requires very little maintenance. Pruning and fertilising once a year is sufficient. Under extreme drought conditions (> 4 weeks) irrigation is recommended.

MAINTENANCE

Maintenance work is required once or twice a year. The maintenance tasks are as follows:

- General checks
- Fertilization in the spring using sedum fertilizer
- Dead-heading flowers, usually from mid-September. Fine cuttings may remain on the roof, but larger cuttings should be removed
