

Mobilane® Green Screen

Euonymus Dart's Blanket

FACTS

The newest Green Screen variety in the Mobilane range, *Euonymus fortunei* Dart's Blanket. Also known as Spindle, this new addition follows in the same tradition, densely covering the metal grid that is synonymous with Mobilane Green Screens. *Euonymus* is planted into a trough of coconut fibres bound together with a natural latex and filled with potting soil which sits at the bottom of the metal grid. After placing the hedge, this completely biodegradable outer will break down and decompose within one to two years. This system promotes the growth of the instant hedge so that it can root well in open ground. The Mobilane Ready-to-Use Green Screen with *Euonymus* Dart's Blanket can be installed all year round, except when frost is expected.

BENEFITS

- Immediate privacy from a dense, green hedge
- Low maintenance
- Slimline, space-saving system
- Place all year round (except in frost)
- Pet-friendly grid
- Quick and simple to install
- Brings variety to prevent monoculture

CHARACTERISTICS

- Semi-evergreen. Deciduous depending on climatic conditions
- Slow-growing for lower maintenance.
- Yellow-green, deep bronze or purple red in winter.
- Salt-tolerant for coastal and roadside resilience
- Suitable in any soil type.
- Foliage helps absorption of fine dust and pollutants
- Galvanized steel grid with ten-year warranty
- Sustainably grown

TECHNICAL INFORMATION

DIMENSIONS

The Mobilane *Euonymus* Dart's Blanket Green Screen has a standard width of 1.20 metres and is available in 2 different height sizes; 1.00 and 1.80 metres.

INSTALLATION EQUIPMENT & ACCESSORIES

Choose the right installation accessories for your Mobilane *Euonymus* Dart's Blanket Green Screen with an extensive range of installation material (posts, brackets) and accessories (extensions, gates) available.

SOIL EXAMINATION

Check the soil conditions prior to installing your Mobilane *Euonymus* Dart's Blanket Green Screen. The ideal soil should be one rich in humus and suitable for shrub planting. The planting trench should be 40 cm deep. Ensure the planting hole is not waterlogged and is free-draining. The soil must be free of debris, impenetrable clay layers, etc. If the soil is not rich in humus, add compost prior to planting. This careful soil preparation is essential for the growth of the hedge.

INSTALLATION

View the comprehensive installation guide and installation videos at www.mobilane.nl.

MAINTENANCE

Water immediately after installation and during dry periods. Consult for detailed advice on maintenance of the Mobilane *Euonymus* Dart's Blanket Green Screen on our website.
