

GREEN SCREEN

The Mobilane green screen consists of a steel grid, densely intertwined with climbing plants. The plants are supplied in a coconut-fiber root container filled with potting soil, with a strong metal frame. The coconut planter is made of a mixture of coconut fiber (coir), held together by natural latex. Once the Mobilane green screen is installed, the biodegradable coconut planter completely degrades within one to two years. This system enables the hedge and its root system to develop in a healthy way, so it can achieve its full potential. Mobilane's ready-made living Green Screens can be installed all year round, though planting should be avoided during prolonged periods of frost.

### BENEFITS

- Instant privacy and greenery
- Easy and fast to install
- Contributes to biodiversity
- Contributes to a healthy environment
- Improves air quality
- Reduces fine dust by 40-60%
- Helps make urban areas greener

### FEATURES

- Fully grown
- Available in different heights and types
- Certified sustainable production
- Can be planted throughout the year, except during periods of frost
- Biodegradable pot made of coconut fiber
- Environmentally friendly
- High-quality fencing with 10-year guarantee

Outdoor

Public open spaces

Office

### TECHNICAL INFORMATION

#### DIMENSIONS

Mobilane's ready-made Green Screen is available in a range of heights: 1, 1.55, 1.8, 2, 2.2, and 3 meters. All screens are supplied 1.2 meters wide as standard.

#### PLANT VARIETIES

Mobilane's Green Screen is available in eleven plant varieties:

- Euonymus fort 'Dart's Blanket'
- Hedera helix 'Woerner'
- Hedera helix 'Glacier'
- Hedera hibernica (Irish ivy)
- Hedera helix 'White Ripple'
- Hedera helix 'Green Ripple'
- Hedera helix 'Goldchild'
- Carpinus betulus (hornbeam)
- Pyracantha 'Dart's Red'
- Trachelospermum jasminoides
- Elaeagnus ebbingei

Each of these varieties has its own unique features. All Mobilane green screens are perennial.

#### INSTALLATION EQUIPMENT & ACCESSORIES

Anchoring (posts and brackets) and accessories (grid extensions, gates) may be required as part of the installation of your Mobilane Green Screen.

#### THE RIGHT SOIL

Mobilane Green Screens require soil with high humus content, suitable for planting shrubs. The trench must be at least 40 cm deep. The soil should be water-permeable, with good surface water drainage. It should also be free of debris, impermeable clay layers etc. If the soil has low humus content, a good quality compost should be added. Careful preparation of the soil is essential for the hedge to grow.

#### INSTALLATION
