

GREEN LIVING FENCE

Instant green screen

The Mobilane green living fence consists of a steel grid, densely intertwined with climbing plants. The plants are supplied in a coconut-fiber root container filled with potting soil, with a strong metal frame. The coconut planter is made of a mixture of coconut fiber (coir), held together by natural latex. Once the Mobilane green living fence is installed, the biodegradable coconut planter completely degrades within one to two years. This system enables the hedge and its root system to develop in a healthy way, so it can achieve its full potential. Mobilane's ready-made Green Living Fences can be installed all year round, though planting should be avoided during prolonged periods of frost.

BENEFITS

- Instant privacy and greenery
- Easy and fast to install
- Contributes to biodiversity
- Contributes to a healthy environment
- Improves air quality
- Reduces fine dust by 40-60%
- Helps make urban areas greener

FEATURES

- Fully grown
- Available in different heights
- Sustainable production
- Can be planted throughout the year, except during periods of frost
- Biodegradable pot made of coconut fiber
- Environmentally friendly
- High-quality fencing with 10-year guarantee

TECHNICAL INFORMATION

DIMENSIONS

Mobilane's ready-made Green Living Fence is available in 3 heights and are standard 47.24" wide:

- 4.8 ft high (5.5 ft with planter)
- 6.5 ft high (7.2 ft with planter)
- 7.3 ft high (8.0 ft with planter)

PLANT VARIETIES

Mobilane's Green Living Fence is available in

- Hedera helix 'Woerner'
- Hedera helix 'Thorndale'
- Hedera moroccana 'Spanish Canary'

INSTALLATION EQUIPMENT & ACCESSORIES

Anchoring (posts and brackets) and accessories (grid extensions, gates) may be required as part of the installation of your Mobilane Green Living Fence.

THE RIGHT SOIL

Mobilane Green Living Fences require soil with high humus content, suitable for planting shrubs. The trench must be at least 40 cm deep. The soil should be water-permeable, with good surface water drainage. It should also be free of debris, impermeable clay layers etc. If the soil has low humus content, a good quality compost should be added. Careful preparation of the soil is essential for the hedge to grow.

INSTALLATION
