

LIVEDIVIDER PLUS

LiveDivider PLUS[®]

Modular green room divider

LiveDivider PLUS is a modular green room divider that makes it easy to create a pleasant atmosphere and offer privacy in offices, public buildings, and waiting rooms. This unique system allows you to stack one, two, or three modules — each of which comes with interchangeable cassettes that serve as planters, plus a tank — in any way you wish. The resulting combinations make LiveDivider PLUS a highly flexible, space-saving room divider that can be used in a vast number of ways. The plants on either side of the room divider absorb ambient noise and improve the indoor climate. LiveDivider PLUS creates privacy and distance while retaining the open character of any space.

BENEFITS

- A simple and sustainable way to partition spaces
- Improves acoustics and dampens sound
- Improves the indoor climate and air quality
- Improves focus, productivity, and general well-being; reduces stress
- Takes up little space

indoors offices schools restaurants
